

1 Project

The Luhn's Algorithm is an algorithm developed by Hans Peter Luhn; this algorithm is used by to validate identification numbers and associating them to an issuer. In this project, we will use it to validate (or invalidate) credit card number provided by the user. The program for this project is called:

1.1 Approach

1.2 Data Used

1.3 Task Allocation

1.4 Functionality of Each Thread

1.5 Methods

1.6 Thread Creation

1.7 Thread Join

1.8 Difficulties

1.9 Sources Used

2 Source Code

3 Results

4 Execution Time Comparison
